

MACHINE LEARNING EXAM SPECIFICATION

Please show at least **15 minutes before** the exam. The lists for each classroom will be sent through Elearning, so you should check which classroom you should go to. Seats are pre-assigned, and the rooms will have a seat map with your position. In general, lower numbers are closer to the teacher's desk and higher ones are in the upper part of the room.

The exam is **closed book**: you will not be able to use notes, books, or your phone or computer. When you enter, please place your bags and jackets far from your seat. You should only bring pens and pencils, as paper will be provided to you. The use of non-graphing calculators is allowed, but you can solve the exam without it, and you may bring a bottle of water. You should also bring your **university badge**, as it will be needed for identification.

The exam will last **90 minutes**, and consists of 3 questions which may involve multiple subquestions. You would have to solve learning problems, describe concepts, explain and eventually prove basic theoretical results in the course program (excluding the ones which were marked as "not part of the course" in the slides). Sample exam questions and past exams will be made available on the Elearning page.
