

## BENZENE

### struttura

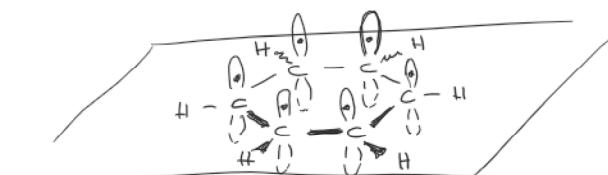

Tutti i c del benzene sono ibridizzati  $sp^2$

orbitali  $sp^2$

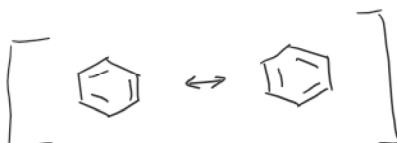

legami  $\sigma$   
ottenuti a forte  
degli orbitali  
ibridi  $sp^2$

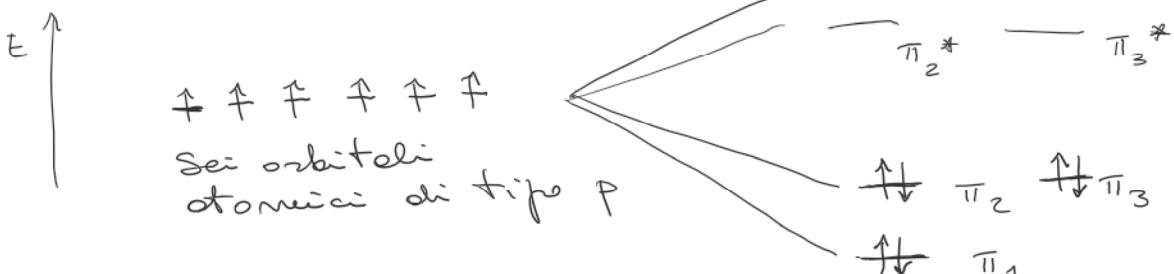

legami tutti nello  
stesso piano

Teoria della risonanza

Teorie degli Orbitali Molecolari

La risonanza che caratterizza il benzene è

la risonanza che caratterizza il benzene è molto vicina tanto da meritare un nome speciale: AROMATICITÀ

- è molto stabile
- ha una reattività particolare

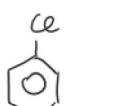

### Regole di Hückel

Un composto è aromatico se rispetta 3 criteri:

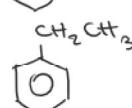

- Deve essere PLANARE
- Deve essere CIClico
- Deve possedere  $4n+2$  elettroni  $\pi$   
Per il benzene con  $n=1 \Rightarrow 6$  elettroni  $\pi$

## NOMENCLATURA

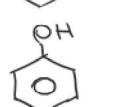

### Benzeni Mono sostituiti:

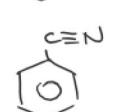

clorobenzene

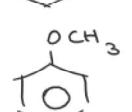

Etilbenzene

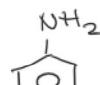

FENOLO

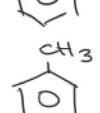

Benzonitrile

ANISOL

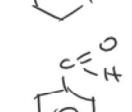

**ANILINA**

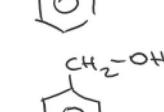

**TOLUENE**

Acido BENZOICO

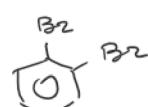

Benzaldeide

Alcol Benzilico

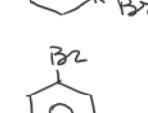

### Benzeni Di sostituiti:

1,2 - Dibromo benzene  
Orto - Dibromo benzene  
o - Dibromo benzene

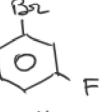

1,3 - Dibromo benzene  
meta - "

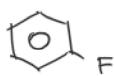

1,4 - Dibromo benzene  
para - "

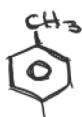

m - bromofluorobenzene

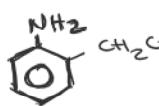

+ n . . .

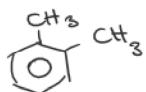

m - bromo furan

p - fluoro toluene

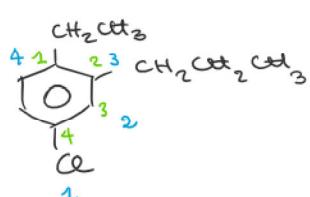

o - ethyl aniline

o - Xylene

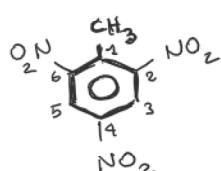

Amelli con più di 2 sostituenti:

1,2,4

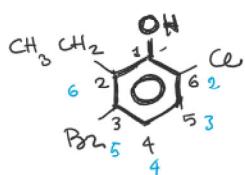

1,3,4

4-chloro-1-ethyl-2-propylbenzene

-NO<sub>2</sub> gruppo NITRO

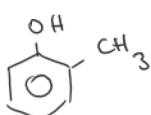

2,4,6 - Tri nitro toluene

2,3,6

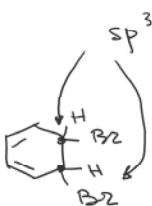

2,5,6

3 - bromo - 6 - chloro - 2 - etil fenolo

o - cresolo

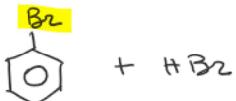

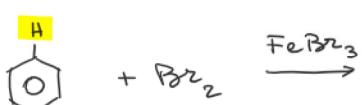

### REATTIVITÀ

Reazione di Addizione

BENZENE  
AROMATICO

PRODOTTO  
NON AROMATICO

Reazione di Sostituzione

PRODOTTO AROMATICO !

## SOSTITUZIONI ELETTRofile AROMATICHE

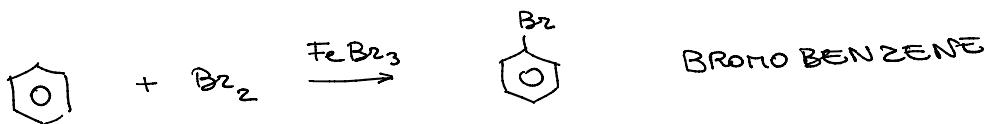

1. ALOGENAZIONE (Bromurazione o Clorurazione)

~

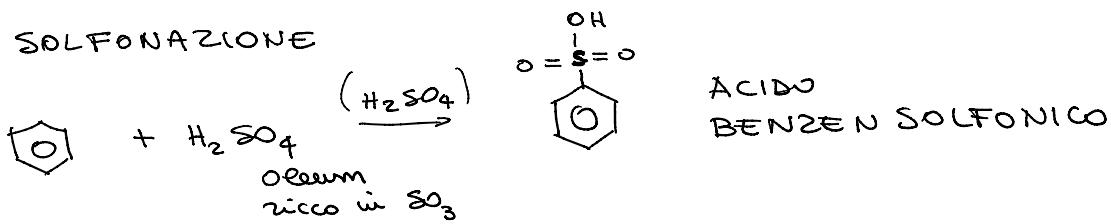

BROMO BENZENE

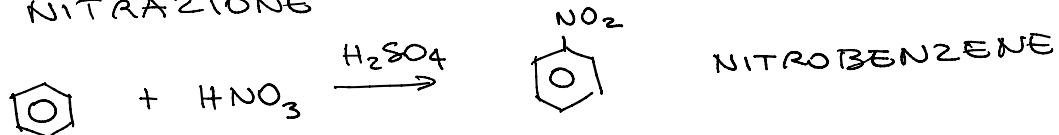

1. ALOGENAZIONE

2. SOLFONAZIONE

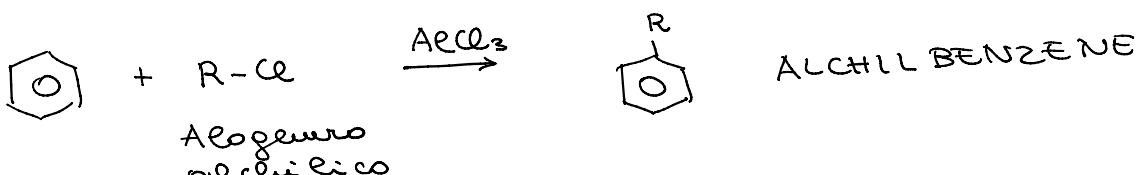

3. NITRAZIONE

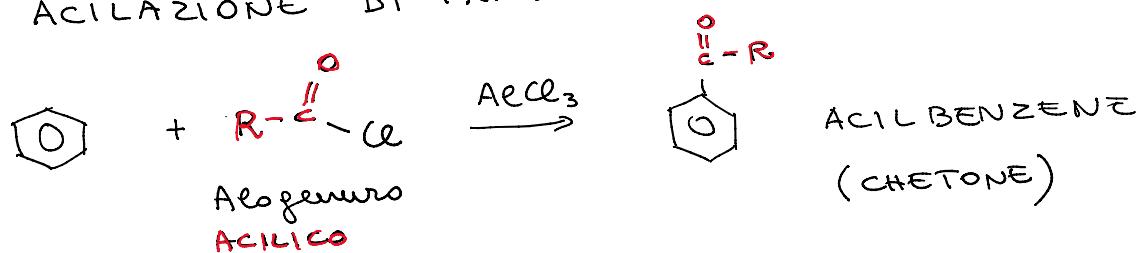

4. ALCHILAZIONE DI FRIEDEL-CRAFTS

→ entra in anello un gruppo alchilico  
(metile, etile, isopropile...)

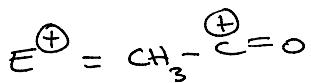

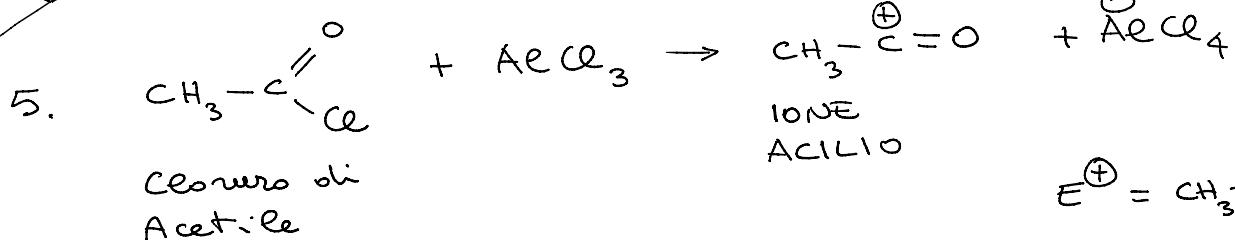

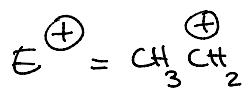

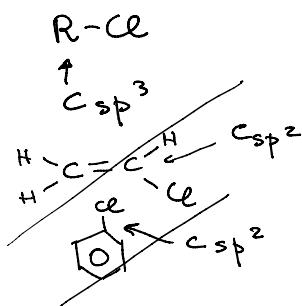

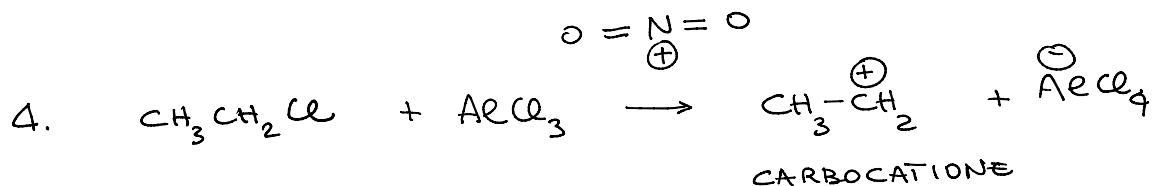

5. ACILAZIONE DI FRIEDEL-CRAFTS

**PRESTADMO**

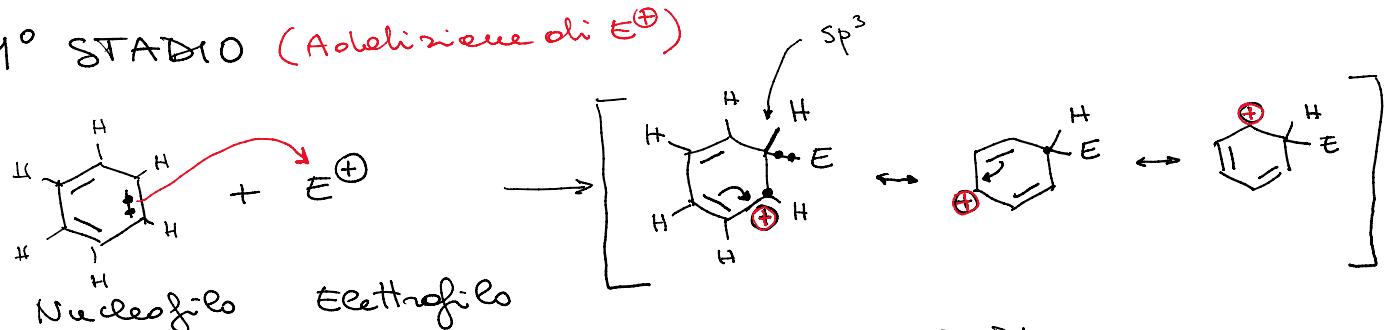

Viene prodotto l'elettronfilo  
grazie al catalizzatore

- $\text{Br}_2 + \text{FeBr}_3 \rightarrow \text{Br}^\oplus + \text{FeBr}_4^\ominus$   $E^\oplus = \text{Br}^\oplus$
- $\text{H}_2\text{SO}_4 + \text{H}_2\text{SO}_4 \rightarrow \text{HSO}_4^\ominus + \text{H}_3\text{SO}_4^\oplus$   
 $\downarrow -\text{H}_2\text{O}$   
 $\text{HSO}_3^\oplus$   $E^\oplus = \text{HSO}_3^\oplus$
- $\text{HNO}_3 + \text{H}_2\text{SO}_4 \rightarrow \text{H}_2\text{NO}_3^\oplus + \text{HSO}_4^\ominus$   
 $\downarrow -\text{H}_2\text{O}$   
 $\text{NO}_2^\oplus$  **IONE NITRONIO**  $E^\oplus = \text{NO}_2^\oplus$

## MECCANISMO DELLA SOSTITUZIONE ELETROFILA AROMATICA (BISTADIO)

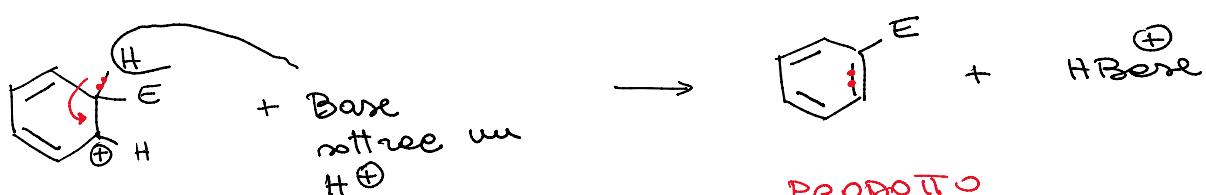

### 1° STADIO (Addizione di $E^+$ )

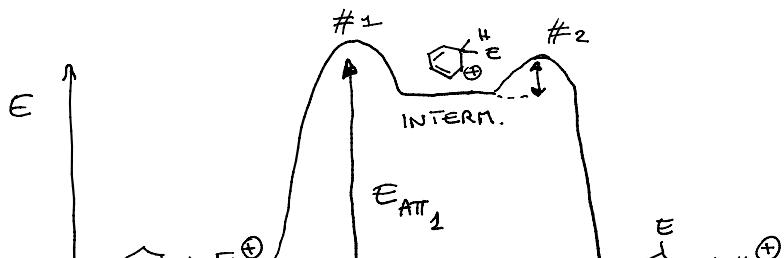

$E$  AROMATICO

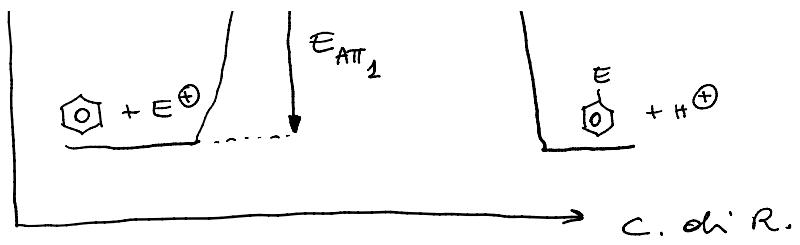

INTERMEDIO DI  
REAZIONE (WHEELAND)  
Stabilizzato per risonanza  
MA NON E' AROMATICO  
(ciclico ma non fluorescente)

### 2° STADIO (Eliminazione di $H^+$ )

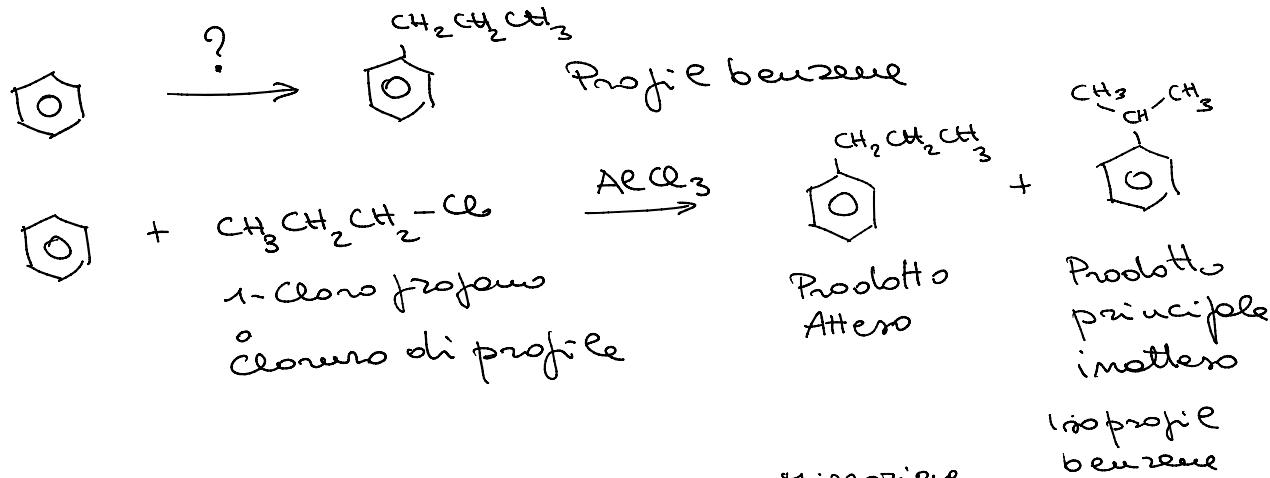

PRODOTTO  
AROMATICO

## LIMITAZIONI DELL' ALCHILAZIONE DI F.-C.

1.

Prestolio
