

Irradiated Foods

General instructions for carrying out the activity individually

In the box "Lesson Tuesday, October 14, 2025 - Asynchronous activity" whose title is "Irradiated food" there is a folder containing various materials:

European regulatory references

Statistical data

Technical opinions

Technical issues regarding irradiation, in addition to two studies available in the "Technology" folder, you can also consult the following URL: <https://www.ifst.org/resources/information-statements/food-irradiation>

The activity is as follows:

- Students from third-country countries should review the current regulations on food irradiation in their own country and prepare a report highlighting similarities and differences with European regulations.
- Students from EU member countries, including Italians, should simulate the needs of a company based in an EU member country exporting certain food categories, here treated using ionizing radiation, to a Third Country (choose a country) with the consequent need to adapt the indications on the label in compliance with what is required in the Third Country
