

LAB 1: Linear Classification and Regression

There are 2 tasks:

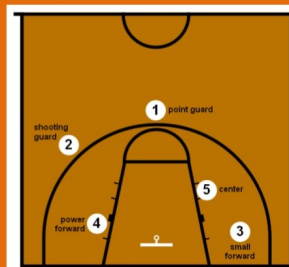

<p>The 5 positions There are 5 positions in the game of basketball:</p> <ol style="list-style-type: none">1. Point Guard2. Shooting Guard3. Small Forward4. Power Forward5. Center  	     
<p><i>Classification of NBA players' roles</i></p>	<p><i>Regression on house prices data</i></p>

The 5 positions

There are 5 positions in the game of basketball:

1. Point Guard
2. Shooting Guard
3. Small Forward
4. Power Forward
5. Center

Classification:

- Implement the Perceptron algorithm
- Use Logistic Regression from Python libraries

Regression:

- Use Least Squares implementation in Python libraries

Complete the Notebook

- ❑ You have to complete the Jupyter notebook:
 - **Classification** problem (NBA roles, perceptron and logistic regression)
 - **Regression** task (house prices, Least Square)
- ❑ **FIRST THING TO DO:** you need to **put your name and ID number** in the notebook

You can also use your ID as a seed for random number generators

- ❑ The notebook has **missing code**: you need to fill in what is missing
- ❑ You **must** write the answer to **all the questions** in the notebook
- ❑ You **should** also include some text/comments (to explain choices or describe results)
- ❑ Feel free to add cells with text if you need to explain or describe some “non-standard” decision!
 - But **do not change the input data files**, they will not be submitted

- Complete the jupyter notebook
 - i.e., write the code and answer to the questions
- Check that they run properly from the beginning with the provided data (**use the "*restart kernel&run all*" command**)
- Save them as `surname_name_lab1.ipynb`
- Submit on elearning

- ❑ Tue 15/11 : Homework released
- ❑ Wed 16/11: Lab 1 (rooms Te/Ue)
- ❑ Tue 29/11: Delivery deadline
- ❑ The outcome is an on-off mark (i.e., +1 for the exam mark if the homework is reasonably done)
