

## Master Degree in Computer Engineering

All regularly enrolled students can obtain their final degree after successfully passing the final evaluation of a series of activities accounting to a total of at least 120 CFU. Each personal training path has to be clearly specified in advance through the so-called “Individual Study Plan”, which has to be directly proposed by each student and it must comply with all national and local regulations. The submission of the Individual Study Plan is via an online submission system which is designed to help in following the mandatory constraints while highlighting what are (and their extent of) the possibilities of free choices. You are expected to submit your individual study plan as soon as possible: its acceptance does confirm you will be awarded the Master Degree as soon as you successfully pass all the chosen activities. For this academic year you can complete your Individual Study Plan proposal until 30 September 2021. After this date you could modify your Individual Study Plan during the next academic year.

In order to help you in the process of submitting your Individual Study Plan, we have written this short guide that will hopefully clarify the main rules for producing a suitable Individual Study Plan. While preparing your Individual Study Plan you can refer to all the official documentation, mainly the so-called “Manifesto degli Studi”.

<https://en.didattica.unipd.it/off/2020/LM/IN/IN2547>

In general, the structure of a Study Plan of the Master Degree in Computer Engineering is the same for all the curricula, and it is divided in the following main parts:

- Core competencies: three courses that are compulsory and shared among all the curricula (for a total of 24 CFU).

They are:

- Automata, Languages and computation 9 CFU
  - Machine Learning 6 CFU
  - Operations Research 1 9 CFU
- Mandatory (core) courses: these courses characterize each curriculum and are different, in number and CFUs, for each curriculum. As the name says, they are “mandatory”.

The courses are, divided for each curriculum:

- Curriculum Artificial Intelligence and Robotics (**a total** of 24 CFU)
  - Artificial Intelligence 6 CFU
  - Computer Vision 9 CFU
  - Intelligent Robotics 9 CFU
- Curriculum Bioinformatics (**a total** of 27 CFU)
  - Inferential Statistics 6 CFU
  - Bioinformatics 9 CFU
  - Computational Genomics 6 CFU
  - Learning from Networks 6 CFU
- High Performance and Big Data Computing (**a total** of 30 CFU)
  - Inferential Statistics 6 CFU
  - Parallel Computing 9 CFU
  - Big Data Computing 6 CFU

- Advanced Algorithm Design 9 CFU
- Web Information and Data Engineering (**a total** of 33 CFU)
  - Computer Networks 9 CFU
  - Search Engines 9 CFU
  - Web Applications 6 CFU
  - Database 2 9 CFU
- Elective courses: they represent a set of course you can freely choose until you reach a minimum number of CFU (the minimum varies across curricula). In this way you can personalize your training path.

They are, divided for each curriculum:

- Curriculum Artificial Intelligence and Robotics (**at least** 27 CFU)
  - Deep Learning 6 CFU
  - Robotics and Control 1 9 CFU
  - Big Data Computing 6 CFU
  - Distributed Systems 9 CFU
  - Industrial Robotics 6 CFU
  - 3D Data Processing 6 CFU
  - Natural Language Proc. 6 CFU
  - Learning from Networks 6 CFU
- Curriculum Bioinformatics (**at least** 24 CFU)
  - Foundations of Databases 6 CFU
  - Artificial Intelligence 6 CFU
  - Big Data Computing 6 CFU
  - Web Applications 6 CFU
  - Distributed Systems 9 CFU
  - Advanced Algorithm Design 9 CFU
  - Computers and Network Security 6 CFU
- High Performance and Big Data Computing (**at least** 21 CFU)
  - Foundations of Databases 6 CFU
  - Artificial Intelligence 6 CFU
  - Bioinformatics 9 CFU
  - Search Engines 9 CFU
  - Deep Learning 6 CFU
  - Distributed Systems 9 CFU
  - Learning from Networks 6 CFU
- Web Information and Data Engineering (**at least** 18 CFU)
  - Foundations of Databases 6 CFU
  - Software Platforms 6 CFU
  - Inferential Statistics 6 CFU
  - Big Data Computing 6 CFU
  - Distributed Systems 9 CFU
  - Concurrent and Real Time Programming 6 CFU
  - Computers and Network Security 6 CFU
  - Computer Engineering for Music and Multimedia 6 CFU
  - Natural Language Processing 6 CFU

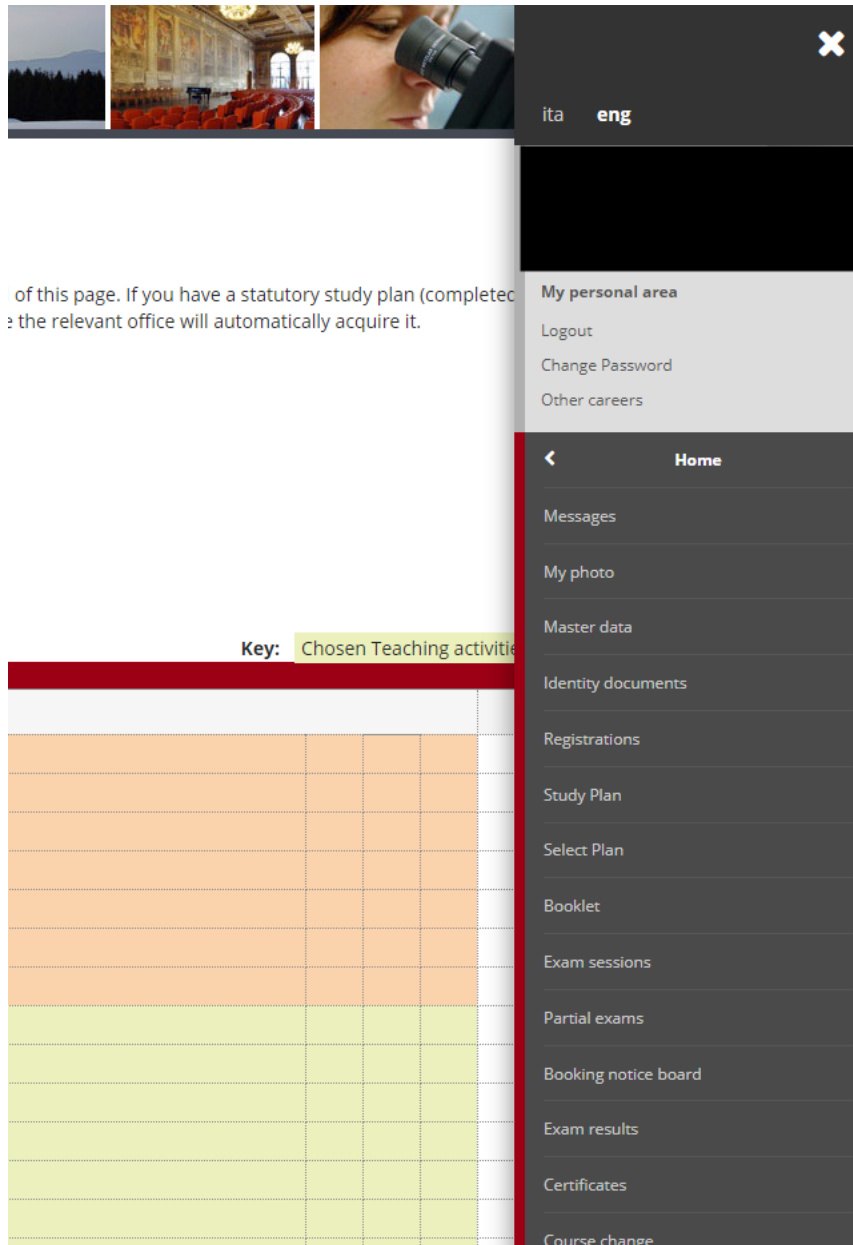

- Other choices: You have to choose a number of courses for at least 12 CFU (and no more than 18 CFU). For each curriculum, we published three lists of courses for “other choices”, you are free to choose any course from any list for a total of at least 12 CFU. These courses allow you to explore subjects of areas different from those required from the chosen curriculum.
- Others: these are mandatory activities like the final project, the language proficiency test, and the internship/research training, for a total of 33 CFU.

In case you believe the proposed schema does not fit your interest and you want to submit an Individual Study Plan that does not strictly follow the constraints on the number of CFU indicated above, you may submit a “free” study plan, together with a written statement that explains the motivations for this plan. In this situation, a committee will evaluate your proposal and decide if it is coherent and admissible with the Master Degree in Computer Science.

To be valid, the Study Plan must have 120 ECTS credits.

## An example of the steps you will see on Uniweb (example for High Performance and Big Data Computing)

Step 1: Choose "Study plan" from the menu (top right)

The screenshot shows the Uniweb interface. At the top, there are three small images: a landscape, an interior room, and a person using a microscope. To the right, there is a dark navigation bar with a close button (X) and language options 'ita' and 'eng'. Below this, a 'My personal area' section contains links for 'Logout', 'Change Password', and 'Other careers'. A dark sidebar menu is open, showing a list of options: 'Home', 'Messages', 'My photo', 'Master data', 'Identity documents', 'Registrations', 'Study Plan' (highlighted in red), 'Select Plan', 'Booklet', 'Exam sessions', 'Partial exams', 'Booking notice board', 'Exam results', 'Certificates', and 'Course change'. In the background, a table is visible with a red header and a green footer, and a key indicating 'Chosen Teaching activities'.

of this page. If you have a statutory study plan (completed : the relevant office will automatically acquire it.

Key: Chosen Teaching activities

## Step 2: Choose the type of plan: AUT (almost automatic approval), PRO (needs approval)

» Piano Carriera » Scelta Schema di Piano

Choice of the course units:

In order to complete your study plan, please select now one of the following plans and click on "ok"

Study plans

	Description	Apri
<input type="radio"/>	IN2547AUT3 - "High performance and big data computing" Track:HIGH PERFORMANCE AND BIG DATA COMPUTING	
<input type="radio"/>	IN2547PRO3 - Individual study plan for "High performance and big data computing" Track:HIGH PERFORMANCE AND BIG DATA COMPUTING	

OK

## Step 3: Check compulsory educational activities (core + mandatory)

» Piano di Studio » Rule

Choice of the course units – Study Plan of

### PLEASE NOTE

The use of the browser keys to go forward or backward in wizard can cause anomalies or errors in filling in the study plan. Keep to the navigation suggested in the page.

#### Rule - No.1 - No year of course

3 AUT core courses - Compulsory educational activities:

- ADVANCED ALGORITHM DESIGN (INQ0091643) - [ CFU: 9 ]
- AUTOMATA, LANGUAGES AND COMPUTATION (INQ0091306) - [ CFU: 9 ]
- BIG DATA COMPUTING (INP7079233) - [ CFU: 6 ]
- INFERENCE STATISTICS (INQ0091582) - [ CFU: 6 ]
- MACHINE LEARNING (INP9087775) - [ CFU: 6 ]
- OPERATIONS RESEARCH 1 (INQ0091561) - [ CFU: 9 ]
- PARALLEL COMPUTING (INQ0091598) - [ CFU: 9 ]
